WORK EXPERIENCE

Software Engineer
THG

Jan 2023 - present — *Bournemouth, England (remote)*

- Backend development in Java and Spring Boot, deployed on Kubernetes and Google Cloud Platform.
- Diagnose and fix production incidents.
- Test-first development and code review.

Associate Software Developer
JPMorgan Chase & Co.

Sep 2022 - Feb 2023 — *Bournemouth, England*

- Built more depth in Spring Boot while working on backend services in a banking environment.
- Hands-on exposure to Kubernetes and cloud deployment.
- Worked with production monitoring and observability.

Graduate Software Engineer
THG

Oct 2021 - Sep 2022 — *Salford, England*

- First professional work in Java and Spring Boot, on a large production system.
- Learned clean-code practices, code review and team delivery workflows.

Python Developer
Karza Technologies

Dec 2018 - Sep 2020 — *Mumbai*

- Responsible for building data pipelines across multiple web sources like BSE, NSE and electoral rolls via web-scraping using python
- Created over 300 web crawlers, harvesting millions of data points, thus creating end to end data pipelines for consumption
- Introduced in-memory download and re-upload of scraped PDFs reducing disk memory usage to a fraction of original

Software Engineer
Bombardier

Aug 2018 - Dec 2018 — *Vadodara, India*

- Responsible for developing web-hmi components for new metro trains

Software Engineer Intern
Symantec

Jan 2017 - Jun 2017 — *Pune, India*

- Built a crawler to collect files and their hashes for the most popular cloud-based software; gathered 1 million files to whitelist, hitting the target within 3 months
- Delivered a second crawler in record time for a time-sensitive, high-priority project
- Stayed on after the project to work with the team on development, across all stages of production

SKILLS

Java | Spring Boot | Python | Kubernetes | Google Cloud Platform | MySQL | Couchbase | MongoDB | TDD | JUnit | Clean code | SOLID | Code review

PROJECTS

Orderly (work in progress)
A learning project: moving from controller-service-repository habits to a hexagonal design, one failing test at a time.

Flight search
A Spring Boot REST API for searching flights, built test-first with hexagonal architecture.

EazyBank
A banking application split into four Spring Boot microservices: a gateway as the single entry point, and account, card and loan services, each with its own PostgreSQL database.

OAuth2 product
An OAuth2 resource server and client with Spring Boot, built test-first and run end to end with Docker Compose.

Batch data migration
Data migration from NoSQL to SQL using Spring Batch.

Thiasil
Website for Thia Glass Works: a Next.js application with a product catalogue, admin panel and PDF catalogue.

WRITING

A four-part series on OAuth2 with Spring Boot, each part with a working app.

Medium: sharanggupta.medium.com

EDUCATION

MSc Computer Science (Distinction)
University of Southampton

2020 - 2021

BTech Computer Science and Engineering
Symbiosis Institute of Technology, Pune

2014 - 2018

INITIATIVE

Smart India Hackathon 2018, Grand Finale
Built a solution to calculate trade margins for businesses (Ministry of Statistics and Programme Implementation problem statement).

Taught Android app development
To second-year MTech students at Symbiosis Institute of Technology (Mar-Apr 2017), as part of their IoT course.
